

Dear LS

Herewith I declare, that Jeremy has completed a practical training program of three months at ATO BV (April to June 2002). During this period I have been his supervisor. ATO is part of Wageningen University and Research Centre and research topics concerns the agrotechnological field. Jeremy was part of the Preservation Technology and Food Safety department. The subject he worked on was a combination of both microbiological work as well as chemical work and concerned the extraction and characterisation of a red pigment from bacterial origin. Furthermore, he studied the optimisation of bacterial growth and pigment production.

Jeremy has proved himself to be a very open minded, motivated person. He showed good social skills and fitted very well within our group of researchers. In these three months, he managed to carry out a large amount of work and was not taken aback by disappointments. He worked accurately and organised and showed good communicative skills. He is capable of writing a good report and is able to present his results to his colleagues in a clear way.

Best regards,

Dr. Ir. Irene E. Pol-Hofstad.  
Scientific researcher
